## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

## Claims:

- 1. (Previously Amended) A casing for containing apparatus which in use generates heat, the casing including a heat exchanger arranged to act as a removable wall of the casing, and fluid directing means arranged to be on the exterior of the said removable wall for directing a heat transfer fluid in thermal contact with the said wall in use, such that heat generated in the interior of the casing is transferred to the heat transfer fluid by conduction through the material of the said wall.
- 2. (Previously Amended) A casing as claimed in claim 1, wherein the heat transfer fluid is air and in which air inlet and outlet pipes are provided to channel air to and from a heat transfer chamber incorporating the fluid directing means
- 3. (Previously Amended) A casing as claimed in Claim 2, wherein there are provided means for preventing water from entering the pipes.
- 4. (Previously Amended) A casing as claimed in Claim 3, wherein the ends of the pipes remote from the heat transfer chamber terminate with an air orifice which is orientated to point substantially downwards in use.
- 5. (Previously Amended) A casing as claimed in Claim 1, wherein the inlet/outlet pipes are arranged so that, in use, air enters/exits the pipes at a point lower than that at which it enters/exits the heat transfer chamber.
- 6. (Previously Amended) A casing as claimed in Claim 1, further comprising means for driving the heat transfer fluid to flow through the fluid directing means.
- 7. (Previously Amended) A casing as claimed in Claim 1, wherein the wall is a lid and carries, on its surface remote from the said fluid directing means, a channel for circulation of heated air within the casing in use and the channel includes at least one propulsion means for assisting the circulation of the air through the said channel.
- 8. (Previously amended) A casing according to claim 7, wherein the propulsion means is a fan unit removably mounted in an aperture in the wall of the said channel which is

innermost within the casing in use.

- 9. (Previously Amended) A casing as claimed in claim 1, wherein the fluid directing means are defined at least in part by a plurality of upstanding ribs projecting from the exterior face of the wall.
- 10. (Previously Amended) A casing as claimed in Claim 9, wherein the interior face of the wall has a plurality of upstanding ribs offset with respect to the ribs on the exterior face.
- 11. (Previously Amended) A heat exchanger as claimed in Claim 10, wherein the opposing faces of the exterior and interior ribs are substantially co-linear.
- 12. (Previously Amended) A casing for housing apparatus which in use generates heat, the casing having a heat exchanger as claimed in claim 1.
- 13 42. Cancelled
